Strategy & business case

Defining the right solution from Day One – aligning capacity and cost with programme goals.

Site selection & due diligence

Assessing sites across planning, power, utilities and environment to mitigate risk early.

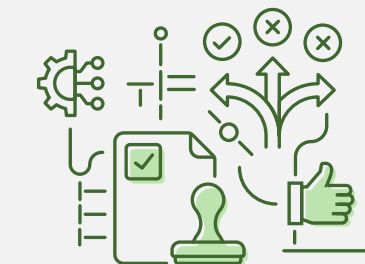

Concept & masterplanning

Developing scalable, flexible masterplans that support phased delivery and long-term efficiency.

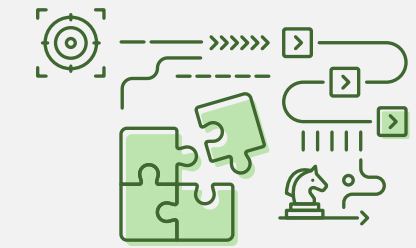

Detailed design

Coordinating disciplines to deliver buildable designs that protect programme certainty and performance.

Planning & consent

Navigating planning frameworks and regulations, supported by established stakeholder relationships.

Procurement

Supporting procurement strategies that align with programme certainty and mitigate delivery risk.

Construction & delivery

Technical oversight, design support and integrated project management for seamless delivery.

Testing, commissioning & handover

Ensuring systems perform as intended, risks are closed out and facilities are operation-ready.
